

DO YOU SUFFER FROM FREQUENT SEVERE ASTHMA ATTACKS?

你的哮喘病是不是经常发作?

# Educational Workshop for Asthma Patients

哮喘教育課程

In Singapore, 140,000 people currently have asthma and more than 100 people die of the disease each year. **Asthma can be a life-threatening condition, but there is now a new way to manage the disease.**

Most people can control their asthma by using inhalers and by consulting their physicians. However, those with severe asthma may be eligible for a new therapy called Bronchial Thermoplasty. Clinical trials showed that after treatment in patients 18 years and older, there is a reduction in severe asthma attacks for up to 5 years.

Boston Scientific and physicians will discuss how to improve the management of asthma in Singapore, with the hope that people with asthma can live, work and play like everyone else.

**Saturday, 19<sup>th</sup> April**
